Empirical implementation-readiness scorecard

E1	Label–source association (Cramér's V, confirmed coding)	0.49 (Partial)
E2	Outcome labels exclusive to one source	11 (Not met)
E3	Discrimination attributable to occupation alone (%, scen. B)	75 (Partial)
E4	Distinct ambient PM2.5 values across zones	2 (Not met)
E5	Single-variable labelling artefacts within a source	1 (Not met)
J1	Gap across groups in no-disease status left blank (pp)	35 (Not met)
J2	Respondents with ambient PM2.5 (CAMS) coverage (%)	50 (Partial)
J3	TPR gap across occupations (exposure model)	0.93 (Not met)
J4	FPR gap across occupations (exposure model)	1 (Not met)
G1	SHAP rank stability across folds (ρ, full model)	0.96 (Met)
G2	Cross-method importance agreement (ρ, full model)	0.76 (Met)
G3	Expert–data concordance, vehicle (ρ, EEI vs prevalence)	0.05 (Not met)
G4	Records unique on age, sex, occupation, living area (%)	31 (Not met)
L1	Exposure-model AUC, pooled (scen. B)	0.90 (Met)
L2	Exposure-model AUC within occupations (mean, artefact-corrected, scen. B)	0.56 (Not met)
L3	Transfer AUC to unseen occupation (mean, scen. B)	0.49 (Not met)
L4	Calibration error, ECE (exposure model, scen. B)	0.04 (Met)
L5	Thresholds 0.1–0.5 with net benefit > treat-all/none (%)	100 (Met)
